

for more better understanding attached pdf regex in matches activity will be
"[0-9]{2}.[0-9]{2}.[0-9]{4}" to get this output { [05.06.2019], [18.09.2020], [26.04.2021],
[31.12.2021] } So I believe it will be like: 1.input: the Result of a Regex - IEnumerable(of
Match) it is s output of matches activity but when i update in datatable it comes as
system.Text.RegularExpressions.MatchCollection 2.Matches: DateTime Strings like:
25.07.2020 ----- Yes 3.Matches: DateTime Strings like: 25.07.2020...in dd/MM/yyyy format
expected: the latest Date as String Sample document.pdf (27.0 KB) before doing this also
can we check if all the elements of the list or array are unique ? list is basically set of dates {
[05.06.2019], [18.09.2020], [26.04.2021], [31.12.2021] }
