

for more better understanding attached pdf regex in matches activity will be  
"[0-9]{2}.[0-9]{2}.[0-9]{4}"  
to get this output

```
{ [15.06.2019], [28.09.2020], [06.04.2021], [31.12.2021] }
```

So I believe it will be like: 1.input: the Result of a Regex - IEnumerable(of Match) it is s  
output of matches activity  
but when i update in datatable it comes as ystem.Text.RegularExpressions.MatchCollection

2.Matches: DateTime Strings like: 25.07.2020 ----- Yes

3.Matches: DateTime Strings like: 25.07.2020...in dd/MM/yyyy format expected:

the latest Date as String Sample document.pdf (27.0 KB)

before doing this also can we check if all the elements of the list or array are unique ? list is  
basically set of dates { [05.06.2019], [18.09.2020], [26.04.2021], [31.12.2021] }
